Spe-ed™ Pressure Vessel Baskets

Devices for easily removing contents from a pressure vessel after extraction/reaction.

Applied Separations' Teflon vessel baskets aid in the efficiency of your extraction work flow. Now you can load your samples into the basket and easily insert and remove it from the vessel. You no longer need to remove the sample from the vessel itself.

The baskets are made to fit 300mL, 500mL and 1L size vessels, with interchangeable stainless steel frits. Frits pore size ranges from 5µ to 200µ

Since all baskets fit snugly in their vessel, there is no bypass. All the CO_2 goes through the basket.

Baskets for specific applications or your special requirements (for example MIM parts) are also available, please inquire.)

The vessel basket fits snugly into the vessel, allowing for no CO_2 bypass.

Teflon Vessel Basket with interchangable frit kit.
